

Most Book Prices Cluster Around £50

We analyzed the entire bookstore market to see what competitors charge. A huge wave of books sits right at the £50 .This is the baseline price. It shows exactly what amount money most buyers on this platform expect to spend.

Title Length Has No Impact on Book Price

We checked if writing longer or more detailed book titles helps authors charge more money. The dots on our scatter plot are spread out randomly with no clear trend line. Title length does not create extra value. We should keep our title short and catchy instead of making it long.

Middle-Rated Three-Star Books Offer the Highest Average Price

We calculated the average cost for every star rating group to see if better quality costs more. Surprisingly, middle-of-the-road 3-star books actually carry the highest price tag on average. Price and quality are disconnected here. Mid-tier books are being priced too high for the value they offer.

One-Star Ratings Peak Among Top-Tier Books

We mapped out where the worst customer reviews happen across different price points. The highest wave of 1-star reviews belongs to the most expensive, top-tier books. High prices make buyers incredibly critical. Entering the premium tier is a massive financial risk for our new launch.

Most Book Prices Cluster Around £50

One-Star Ratings Peak Among Top-Tier Books

Middle-Rated Three-Star Books Offer the Highest

Average Price

1. The Setup (The Context)

We scraped bookstore data to analyze market trends, price spreads, and review patterns. Our goal is to locate the safest and most profitable entry point for our upcoming product launch.

2. The Climax (The Major Discoveries)

Our chart analysis revealed a dangerous trap in the current market tiering:

- Market Spread: Most book prices cluster around £50, showing a strong baseline.*
- Title Length: Writing longer or shorter titles has no impact on price.*
- The Surprise: Middle-of-the-road 3-star books offer the highest average price.*
- The Risk: Highly expensive one-star ratings peak among top-tier books, proving that buyers have a very low tolerance for high prices unless quality is absolutely flawless.*

3. The Resolution (Our Final Strategy)

Recommendation: We will completely skip the premium price tier at launch. Instead, we will price our new book near the £50 market cluster. We will focus our budget entirely on product quality rather than title optimization to avoid the 1-star reviews currently killing high-priced competitors.
